Handbook on Women and Aging - Jean M. Corley 2001 Statistics show that women live longer than men, and that they constitute a substantial majority of the North American population over age 50. But lack of empirical data on aging women has helped to perpetuate numerous myths and stereotypes. This reference provides a comprehensive overview of current research on women and aging. Chapters are written by experts in their fields and are grouped in sections devoted to historical and theoretical views, economic concerns, health and lifestyle issues, demographic information, and reachability. Chapters reflect research on women from diverse racial and ethnic groups, examine the part played by social and cultural forces, and the problem of sexism and aging, and the impact of significant life events, such as retirement and widowhood. Chapters cite current research, and the volume closes with a selected bibliography of major works.

Handbook of the Psychology of Aging - Warner Schaie 2010-12-21 The Handbook of the Psychology of Aging, Seventh Edition, provides a basic reference source on the behavioral processes of aging for researchers, graduate students, and professionals. It offers a broad view of the science of aging from many different disciplines. The book is organized into four parts. Part 1 reviews key methodological and analytical issues in aging research. It examines some of the major historical influences that might provide explanations for the dramatic increase in life expectancy in the past century. Part 2 includes chapters that discuss the basics and nuances of executive function; the history of the modern psychology of memory; and the role of sleep in aging. Part 3 deals with the social and health aspects of aging. It covers the beliefs that individuals have about how much they can do, and how their psychosocial outcomes influence aging and the importance of the transitions between health disparities, social class, and aging. Part 4 discusses the emotional aspects of aging, family caregiving; and mental disorders and legal capacities in older adults. Contains all the main areas of psychological research in aging. The Handbook of the Psychology of Aging reflects the latest developments in research and theory and methods Edited by one of the father of gerontology (Schaie) and contribute represent top scholars in gerontology.

Handbook of Theories of Aging, Second Edition  Morris Silberstein, PhD 2008-10-27 The field of gerontology has often been criticized for being “data-rich theory-poor.” This becomes the book’s issue by stressing the importance of theory in gerontology. While the previous edition focused on multidisciplinary approaches to aging theory, this new edition provides cross-disciplinary, integrative explanations of aging theory. The contributors of this text have reached beyond traditional disciplinary boundaries to partner with researchers in other disciplines to expand the study of human development. The handbook is organized into 20 chapters written by 67 internationally recognized experts in the field of aging. It is organized in seven sections, reflecting the major theoretical developments in gerontology over the past 10 years. Special Features: Contains an overview and introduction to the field of aging. A portion of this handbook is dedicated to the study of Aging and Disability. A section dedicated to discussing how aging theory informs policy. A concluding chapter summarizing the major theoretical developments in aging theory. The handbook has been updated to include recent research and studies. Graduate students and post doctoral fellows, this handbook represents the current status of theoretical development in the study of aging.

The Cambridge Handbook of the International Psychology of Women  Fanny M. Cheung  2020-06-30 There is a growing knowledge base in understanding the differences and similarities between women and men, as well as the differences among women and sexualities. Although genetic and biological characteristics define human beings conventionally as women or men, their experiences are contextualized in multiple dimensions in terms of gender, class, age, ethnicity, and other social dimensions. Beyond the biological and genetic basis of gender differences, gender intersects with culture and other social locations which affect the socialization and development of women across their life span. This handbook provides a comprehensive and up-to-date resource to understand the diversity of women’s life experiences. It addresses the theoretical and methodological issues as well as culturally relevant implications and appropriate interventions. Featuring a truly international mix of contributors, and a truly international mix of topics, this book will inform mainstream psychology of the international literature on the psychology of women and gender.

Handbook of Emotion, Adult Development, and Aging  Carol Magai  1996-10-24 The field of emotions remains one of the most rapidly evolving areas of scientific inquiry, and recent trends are reflected in the new edition of this book. This new edition is a comprehensive volume divided into three parts. Part One, Emotions, covers the basic processes of emotion, including the experience, expression, and regulation of emotions from a developmental perspective. Part Two, Emotion and Gender Differences, focuses on how emotional experiences and processes vary as a function of gender. Part Three, Emotion and Health, covers issues of stress and coping, religion, personality, and quality of life. The final part focuses on change in emotion and emotion-related processes across the life span. The book will continue to be relevant and comprehensive, allowing it to serve as a reference for professionals as new research is done in older adults engaged in emotion self-regulation. The book is also a key resource for those interested in the role of emotion in self-regulation.

Handbook on the Neuropsychology of Aging and Dementia - Lisa D. Ravdin 2012-09-14 With the aging of the baby boomers and medical advances that promote longevity, older adults are rapidly becoming the fastest growing segment of the population. As the population ages, so does the incidence of age related disorders. Many predict that 15% - 20% of the baby-boomer generation will develop some form of cognitive decline over the course of their lifetime, with estimates escalating to up to 50% in those achieving advanced age. Although much attention has been directed at Alzheimer’s disease, the most common form of dementia, it is estimated that nearly one third of those cases of cognitive decline result from other neuropathological mechanisms. In fact, many patients diagnosed with Alzheimer’s disease likely have co-morbid disorders that can also influence cognition (i.e., vascular cognitive impairment), suggesting mixed dementias are grossly under diagnosed. The Clinical Handbook on the Neuropsychology of Aging and Dementia is a unique work that provides clinicians with expert guidance and a hands-on approach to neuropsychological practice with older adults. The book will be divided into two sections, the first addressing special considerations for the evaluation of older adults, and the second half focusing on common referral questions likely to be encountered when working with this age group. The authors of the chapters are experts and are recognized by their peers as opinion leaders in their chosen chapter topics. The field of neuropsychology has played a critical role in developing methods for early identification of late life cognitive disorders as well as the differential diagnosis of dementia. Neuropsychological assessment provides valuable clinical information regarding the nature and severity of cognitive symptoms associated with dementia. Each chapter will reinforce the notion that neuropsychological measures provide the clinician with sensitive tools to differentiate normal age-related cognitive decline from disease-associated impairment, aid in differential diagnosis of cognitive dysfunction in older adults, as well as identify cognitive deficits most likely to translate into functional impairments in everyday life.
